U.S. Patent and Trademark Office PTO-326 (Rev. 11/00)

Part of Paper No. -

Serial No. 10/017,193

Art Unit 1762

- 1. Restriction to one of the following inventions is required under 35 U.S.C. § 121:
- I. Claims 1-31, drawn to a process for atmospheric plasma pretreatment of substrates, then exposing to functionalize, classified in Class 427, subclass 536+.
- II. Claim 32, drawn to a functionalized substrate, classified in Class 428, subclass 188 or 520.
- 2. Claims 1-8 and 21-32 are generic to a plurality of disclosed patentably distinct species comprising
 - A. nucleic/amino acid base;
 - B. carbohydrates;

with subspecies for both species A and B being:

- I. antithrombogenic agents;
- ii. cell attachment factor;
- iii. receptor or ligand;
 - iv. growth factor;
 - v. antibiotic;
 - vi. enzyme.

Please choose either species A or B, then one of species I-vi.

Applicant is required under 35 U.S.C. § 121 to elect a single disclosed species, even though this requirement is traversed.

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the

Serial No. 10/017,193

Art Unit 1762

evidence or admission may be used in a rejection under 35 U.S.C. § 103 of the other invention.

3. The inventions are distinct, each from the other because of the following reasons:

Inventions Group I and Group II are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case the products may be made by different processes, such as plasma activation using low pressure plasmas, chemical solution surface activations, photolytic surface activations, flame surface activations and electron beam surface activations, etc.

4. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classifications, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art because of their recognized divergent subject matter, restriction for examination purposes as indicated is proper.

Because these inventions are distinct for the reasons given above and the search required for Group II is not required

Art Unit 1762

for Group I, restriction for examination purposes as indicated is proper.

- 5. A telephone call was made to Larry Thrower on 3/17/03 and 3/18/03 to request an oral election to the above restriction requirement, but did not result in an election being made. Mr. Thrower requested mailing in order to review the restriction with his client.
- 6. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

7. Any inquiry concerning this communication should be directed to M. L. Padgett from Monday through Friday from about 8 A.M. to 4:30 P.M. at telephone number (703) 308-2336 and FAX #703 872-9310 (official), 872-9311 (official after final) and 305-6078 (unofficial).
